

Biomechanics and Improvements in Training

1. Principle of Specificity
2. Technical Training
3. Physical Training
4. Qualitative Anatomical Analysis

Specificity

In training, it is key to replicate: 1) angular displacements and velocities, 2) contraction types, and 3) force magnitudes. The best way to do this is to perform the skill.

ID physical and technical skill requirements; some skills are more physical, while others are more technical. These two facets of skill usually overlap.

Technical Training

Perform the technique correctly: check performance via qualitative biomechanical analysis (Chapter 13)

If you cannot perform the technique correctly, perform drills mimicking the technique; ensure that the drill is specific to the skill

Biomechanics can be helpful in quantitatively and qualitatively evaluating a drill

Physical Training

Improving physical condition:

- Muscular strength, power, and endurance
- Cardiovascular fitness
- Body composition

You should be able to identify what anatomy must be emphasized

Performing the skill also improves physical skill

Qualitative Anatomical Analysis

How can you identify predominant muscular activity during performance?

Some ideas:

- Touch
- Muscle Soreness
- EMG
- Motion Analysis/Inverse Dynamics

One Way: Qualitative Anatomical Analysis

1. Temporal phases of the skill
2. Joint motions during each phase
3. Muscular contraction type
4. High accelerations
5. Extreme ranges of motion

Table 14.1 Sample Qualitative Anatomical Analysis of a Wide-Grip Bench Press

| Joint | Phase of motion | Joint motion | Muscle contraction | Active muscle group | Rapid acceleration or impact | Extreme range of motion |
|----------|-----------------|----------------------|--------------------|---------------------|------------------------------|---|
| Elbow | Down | Flexion | Eccentric | Extensors | At end of phase | Full flexion at end of phase |
| | Up | Extension | Concentric | Extensors | At beginning of phase | |
| Shoulder | Down | Horizontal extension | Eccentric | Horizontal flexors | At end of phase | Full horizontal extension at end of phase |
| | Up | Horizontal flexion | Concentric | Horizontal flexors | At beginning of phase | |

1. Temporal Phase Division

- Do it yourself, if you know the skill well
- A video camera may be helpful/necessary
- Study textbooks or coaches manuals
- Examples:
 - Tennis Serve
 - Yurchenko Vault
 - Baseball Pitch

| Phases | Description |
|----------------------|---|
| Wind-up | Starts with ball and racket at rest in front of subject and finishes when ball reaches the level of shoulder height |
| Early Cocking | Cocking continues from ball at shoulder height until maximal shoulder external rotation. Early cocking makes up the first 75% of this motion |
| Late Cocking | Represented as the last 25% of the entire cocking motion |
| Acceleration | Initiates at maximal shoulder external rotation and ends at ball impact. |
| Early Follow Through | Follow through starts at ball impact and completes when the racket tip reaches its lowest vertical point. Early follow is the first 25% of this motion. |
| Late Follow Through | Late follow through represents the last 75% of the entire follow through motion. |

YV Temporal Phases

Baseball Pitch Temporal Phases

Fleisig et al. (1999)

2. Identify the Joint Motions During Each Skill Phase

Fleisig et al. (1999)

Table 1
Kinematics differences among levels

| | Youth (n = 28) | High school (n = 10) | College (n = 11) | Professional (n = 6) | Significant differences |
|--|----------------|----------------------|------------------|----------------------|-------------------------|
| <i>Phase duration</i> | | | | | |
| Stride length (% height) | 85 ± 9 | 81 ± 9 | 81 ± 6 | 80 ± 1 | |
| Forward velocity (°) | 17 ± 28 | 11 ± 20 | 11 ± 20 | 10 ± 26 | |
| Elbow flexion (°) | 74 ± 17 | 82 ± 17 | 85 ± 18 | 87 ± 11 | **b,c,d |
| Knee flexion (°) | 41 ± 12 | 39 ± 9 | 41 ± 12 | 40 ± 5 | |
| <i>Arm cocking phase</i> | | | | | |
| Maximum pelvic velocity (°/s) | 1159 ± 110 | 648 ± 90 | 1751 ± 90 | 1251 ± 88 | **b |
| Maximum upper torso velocity (°/s) | 1189 ± 110 | 1130 ± 110 | 1149 ± 109 | 1241 ± 89 | **b,c,d |
| Maximum elbow flexion (°) | 95 ± 12 | 100 ± 14 | 89 ± 11 | 96 ± 11 | |
| Maximum forearm adduction (°) | 31 ± 4 | 30 ± 9 | 30 ± 5 | 37 ± 9 | |
| Maximum external rotation (°) | 177 ± 12 | 174 ± 9 | 172 ± 10 | 173 ± 11 | |
| <i>Arm acceleration phase</i> | | | | | |
| Maximum elbow extension velocity (°/s) | 2219 ± 200 | 2140 ± 140 | 2161 ± 200 | 2321 ± 199 | **b,c,d |
| Maximum external rotation velocity (°/s) | 9909 ± 1070 | 4629 ± 1360 | 7493 ± 1270 | 7241 ± 1090 | *b |
| <i>Arm release</i> | | | | | |
| Elbow flexion (°) | 24 ± 7 | 23 ± 7 | 23 ± 6 | 23 ± 1 | |
| Forearm adduction (°) | 11 ± 9 | 10 ± 8 | 9 ± 9 | 9 ± 10 | |
| Trunk tilt (°) | 32 ± 9 | 31 ± 9 | 30 ± 10 | 31 ± 9 | |
| Knee flexion (°) | 49 ± 11 | 43 ± 11 | 49 ± 11 | 48 ± 11 | |
| Ball speed (m/s) | 29 ± 1 | 31 ± 2 | 30 ± 2 | 37 ± 2 | **b,c,d,e,f |

Note: Significant differences (p < 0.05) between (a) youth and high school, (b) youth and college, (c) youth and professional, (d) high school and college, (e) high school and professional, and (f) college and professional.
* Significant difference (p < 0.05) among four levels.
** Significant difference (p < 0.01) among four levels.

3. Muscle Contractions

- Identify which muscles are active, and when each muscle is active
- Identify contraction type for active muscles

4. High Accelerations

- Identify events that result in high accelerations...again, you can employ fancy instrumentation or common sense, or both.
 - Yurchenko Vault
 - Tennis Serve and Baseball Pitch

5. Extreme Ranges of Motion

- Identify events that results in extreme ranges of motion

Table 1
Kinematic differences among levels

| | Youth (n = 76) | High school (n = 55) | College (n = 111) | Professional (n = 101) | Statistical differences |
|--|----------------|----------------------|-------------------|------------------------|-------------------------|
| Foot-foot contact | | | | | |
| Stride length (% height) | 85 ± 8 | 85 ± 9 | 85 ± 8 | 86 ± 8 | |
| Staircase velocity (°) | 67 ± 26 | 68 ± 25 | 67 ± 26 | 68 ± 26 | |
| Elbow flexion (°) | 74 ± 17 | 73 ± 17 | 85 ± 18 | 87 ± 15 | **§§ |
| Knee flexion (°) | 47 ± 12 | 50 ± 9 | 48 ± 12 | 48 ± 9 | |
| Arm-shoulder phase | | | | | |
| Maximum pelvic velocity (°/s) | 450 ± 148 | 446 ± 159 | 476 ± 166 | 450 ± 160 | **§§ |
| Maximum upper torso velocity (°/s) | 1100 ± 110 | 1030 ± 110 | 1030 ± 110 | 1000 ± 90 | **§§§§ |
| Maximum elbow flexion (°) | 94 ± 12 | 93 ± 14 | 99 ± 14 | 99 ± 14 | |
| Maximum horizontal abduction (°) | 28 ± 7 | 28 ± 7 | 30 ± 7 | 31 ± 7 | |
| Maximum external rotation (°) | 177 ± 12 | 174 ± 9 | 177 ± 10 | 175 ± 11 | |
| Arm-shoulder phase | | | | | |
| Maximum elbow extension velocity (°/s) | 1110 ± 300 | 740 ± 340 | 710 ± 300 | 1110 ± 300 | **§§,§§§ |
| Maximum internal rotation velocity (°/s) | 4000 ± 1000 | 4570 ± 1300 | 5430 ± 1750 | 5740 ± 1000 | **§§ |
| Ball motion | | | | | |
| Elbow flexion (°) | 73 ± 7 | 73 ± 7 | 73 ± 6 | 73 ± 6 | |
| Horizontal abduction (°) | 18 ± 6 | 18 ± 6 | 18 ± 6 | 18 ± 6 | |
| Elbow flexion (°) | 12 ± 6 | 11 ± 6 | 11 ± 6 | 11 ± 6 | |
| Knee flexion (°) | 38 ± 11 | 43 ± 13 | 39 ± 17 | 38 ± 13 | |
| Ball speed (m/s) | 29 ± 1 | 31 ± 2 | 31 ± 2 | 37 ± 2 | **§§,§§§,§§§§ |

Notes: Statistical differences (p < 0.05) between (a) youth and high school, (b) youth and college, (c) youth and professional, (d) high school and college, (e) high school and professional, and (f) college and professional.
 **Significant differences (p < 0.01) among four levels.
 ***Significant differences (p < 0.001) among four levels.

Your own training program:

1. Qualitative anatomical analysis

- Identify temporal phases
- Describe motion
- Discuss muscle contraction types
- Extreme ranges of motion
- High accelerations

2. Training Program:

- What should have highest priority?
- Physical skill or technical skill? Why
- Drills that can be incorporated?
- Weekly schedule.

Summary

- Biomechanics can assist in improving training and performance
- Principle of specificity leads to performance of the skill or drills that mimic the skill
- Technical versus physical training
- Qualitative Anatomical Analysis
 - Temporal phases
 - Involved joints and motions
 - Involved muscle and type of muscular contraction
 - High accelerations and impacts
 - Extreme ranges of motion
